

UNIMET 19" RACK CASES – Stylish Instrument Enclosures

OKW have launched the new UNIMET 19" rack cases which are manufactured by their METCASE aluminium enclosures division. These stylish 19" enclosures have been designed for test and measurement devices, audio and video systems and networking and communications equipment.

UNIMET 19" cases are available in two standard heights: 2U and 3U and in depths of 280mm and 380mm. The cases are painted in a modern fine textured light grey, RAL 7035 and window grey, RAL 7040 colour combination. The attractive design and finish is suitable for equipment which is designed for both rack mounting and desktop applications.

The aluminium construction consists of a die-cast front bezel which locates onto the fabricated case body. The stylish front bezel incorporates the rack mounting ears and unique ergonomic 'comfort handles' for maximum comfort when carrying and loading into the rack. The base panel can be removed separately, and includes mounting points for PCBs, assemblies and accessory ABS tilt feet.

Anodised aluminium front panels are available as accessories and are located into a recess in the front bezel. The front panels include two ABS trims which hide the fixing screws and allow for fitting of a membrane keypad or product label. The removable rear panel is also recessed to provide protection for power inlets, connectors, on/off switches, fan grills etc.

Prices for the UNIMET 19" rack cases start at £85. OKW also offers a full customising service on these enclosures with milling, silk-screen printing and much more, providing a fully finished housing ready for the electronic components.

More information on these enclosures can be found on OKW's website at **www.okw.co.uk/unimet19**
